Algebra II Honors: Unit 1
Complex Solutions and Modeling with Rational Exponent
Course Philosophy/Description

Algebra II Honors course is for accelerated students. This course is designed for students who exhibit high interest and knowledge in math and science. In this course, students will extend topics introduced in Algebra I and learn to manipulate and apply more advanced functions and algorithms. Students extend their knowledge and understanding by solving open-ended real-world problems and thinking critically through the use of high level tasks and long-term projects.

Students will be expected to demonstrate their knowledge in: utilizing essential algebraic concepts to perform calculations on polynomial expression; performing operations with complex numbers and graphing complex numbers; solving and graphing linear equations/inequalities and systems of linear equations/inequalities; solving, graphing, and interpreting the solutions of quadratic functions; solving, graphing, and analyzing solutions of polynomial functions, including complex solutions; manipulating rational expressions, solving rational equations, and graphing rational functions; solving logarithmic and exponential equations; and performing operations on matrices and solving matrix equations.
ESL Framework

This ESL framework was designed to be used by bilingual, dual language, ESL and general education teachers. Bilingual and dual language programs use the home language and a second language for instruction. ESL teachers and general education or bilingual teachers may use this document to collaborate on unit and lesson planning to decide who will address certain components of the SLO and language objective. ESL teachers may use the appropriate leveled language objective to build lessons for ELLs which reflects what is covered in the general education program. In this way, whether it is a pull-out or push-in model, all teachers are working on the same Student Learning Objective connected to the New Jersey Student Learning Standards. The design of language objectives are based on the alignment of the World-Class Instructional Design Assessment (WIDA) Consortium’s English Language Development (ELD) standards with the New Jersey Student Learning Standards (NJSLS). WIDA’s ELD standards advance academic language development across content areas ultimately leading to academic achievement for English learners. As English learners are progressing through the six developmental linguistic stages, this framework will assist all teachers who work with English learners to appropriately identify the language needed to meet the requirements of the content standard. At the same time, the language objectives recognize the cognitive demand required to complete educational tasks. Even though listening and reading (receptive) skills differ from speaking and writing (expressive) skills across proficiency levels the cognitive function should not be diminished. For example, an Entering Level One student only has the linguistic ability to respond in single words in English with significant support from their home language. However, they could complete a Venn diagram with single words which demonstrates that they understand how the elements compare and contrast with each other or they could respond with the support of their native language with assistance from a teacher, para-professional, peer or a technology program.

+ **These standards/SLOs have been added designed specifically for Algebra 2 Honors to deepen and extend student understanding and to better prepare students for Pre-Calculus.**
Research about Teaching and Learning Mathematics

Structure teaching of mathematical concepts and skills around problems to be solved (Checkly, 1997; Wood & Sellars, 1996; Wood & Sellars, 1997)

Encourage students to work cooperatively with others (Johnson & Johnson, 1975; Davidson, 1990)

Use group problem-solving to stimulate students to apply their mathematical thinking skills (Artzt & Armour-Thomas, 1992)

Students interact in ways that support and challenge one another’s strategic thinking (Artzt, Armour-Thomas, & Curcio, 2008)

Activities structured in ways allowing students to explore, explain, extend, and evaluate their progress (National Research Council, 1999)

There are three critical components to effective mathematics instruction (Shellard & Moyer, 2002):

- Teaching for conceptual understanding
- Developing children’s procedural literacy
- Promoting strategic competence through meaningful problem-solving investigations

Teachers should be:

- Demonstrating acceptance and recognition of students’ divergent ideas.
- Challenging students to think deeply about the problems they are solving, extending thinking beyond the solutions and algorithms required to solve the problem
- Influencing learning by asking challenging and interesting questions to accelerate students’ innate inquisitiveness and foster them to examine concepts further.
- Projecting a positive attitude about mathematics and about students’ ability to “do” mathematics

Students should be:

- Actively engaging in “doing” mathematics
- Solving challenging problems
- Investigating meaningful real-world problems
- Making interdisciplinary connections
- Developing an understanding of mathematical knowledge required to “do” mathematics and connect the language of mathematical ideas with numerical representations
- Sharing mathematical ideas, discussing mathematics with one another, refining and critiquing each other’s ideas and understandings
- Communicating in pairs, small group, or whole group presentations
- Using multiple representations to communicate mathematical ideas
- Using connections between pictures, oral language, written symbols, manipulative models, and real-world situations
- Using technological resources and other 21st century skills to support and enhance mathematical understanding
Mathematics is not a stagnate field of textbook problems; rather, it is a dynamic way of constructing meaning about the world around us, generating knowledge and understanding about the real world every day. Students should be metaphorically rolling up their sleeves and “doing mathematics” themselves, not watching others do mathematics for them or in front of them. (Protheroe, 2007)

**Balanced Mathematics Instructional Model**

Balanced math consists of three different learning opportunities; guided math, shared math, and independent math. Ensuring a balance of all three approaches will build conceptual understanding, problem solving, computational fluency, and procedural fluency. Building a balanced mathematical understanding is the focal point of developing mathematical proficiency. Students should frequently work on rigorous tasks, talk about the math, explain their thinking, justify their answer or process, build models with graphs or charts or manipulatives, and use technology.

When balanced math is used in the classroom it provides students opportunities to:

- solve problems
- make connections between math concepts and real-life situations
- communicate mathematical ideas (orally, visually and in writing)
- choose appropriate materials to solve problems
- reflect and monitor their own understanding of the math concepts
- practice strategies to build procedural and conceptual confidence

**Teacher builds conceptual understanding by**

modeling through demonstration, explicit instruction, and think alouds, as well as guiding students as they practice math strategies and apply problem solving strategies. (whole group or small group instruction)

**Teacher and students practice mathematics processes together through interactive activities, problem solving, and discussion. (whole group or small group instruction)**

**Students practice math strategies independently to**

build procedural and computational fluency. Teacher assesses learning and reteaches as necessary. (whole group instruction, small group instruction, or centers)

Educational Technology

Standards

8.1.12.A.1, 8.1.12.C.1, 8.1.12.F.1, 8.2.12.E.3

➢ Technology Operations and Concepts
  • Create a personal digital portfolio which reflects personal and academic interests, achievements, and career aspirations by using a variety of digital tools and resources.
  
  Example: Students create personal digital portfolios for coursework using Google Sites, Evernote, WordPress, Edubugs, Weebly, etc.

➢ Communication and Collaboration
  • Develop an innovative solution to a real world problem or issue in collaboration with peers and experts, and present ideas for feedback through social media or in an online community.
  
  Example: Use Google Classroom for real-time communication between teachers, students, and peers to complete assignments and discuss strategies for solving systems of equations.

➢ Critical Thinking, Problem Solving, and Decision Making
  • Evaluate the strengths and limitations of emerging technologies and their impact on educational, career, personal or social needs.
  
  Example: Students use graphing calculators and graph paper to reveal the strengths and weaknesses of technology associated with solving simple systems of linear and quadratic equations in two variables.

➢ Computational Thinking: Programming
  • Use a programming language to solve problems or accomplish a task (e.g., robotic functions, website designs, applications and games).
  
  Example: Students will create a set of instructions explaining how to add, subtract, and multiply complex numbers using the commutative, associative and distributive properties.

Link: http://www.state.nj.us/education/cccs/2014/tech/
# Career Ready Practices

Career Ready Practices describe the career-ready skills that all educators in all content areas should seek to develop in their students. They are practices that have been linked to increase college, career, and life success. Career Ready Practices should be taught and reinforced in all career exploration and preparation programs with increasingly higher levels of complexity and expectation as a student advances through a program of study.

- **CRP2. Apply appropriate academic and technical skills.**
  Career-ready individuals readily access and use the knowledge and skills acquired through experience and education to be more productive. They make connections between abstract concepts with real-world applications, and they make correct insights about when it is appropriate to apply the use of an academic skill in a workplace situation.

  **Example:** Students will apply prior knowledge when solving real world problems. Students will make sound judgements about the use of specific tools, such as algebra tiles, graphing calculators and technology to deepen their understanding of solving quadric equations.

- **CRP4. Communicate clearly and effectively and with reason.**
  Career-ready individuals communicate thoughts, ideas, and action plans with clarity, whether using written, verbal, and/or visual methods. They communicate in the workplace with clarity and purpose to make maximum use of their own and others’ time. They are excellent writers; they master conventions, word choice, and organization, and use effective tone and presentation skills to articulate ideas. They are skilled at interacting with others; they are active listeners and speak clearly and with purpose. Career-ready individuals think about the audience for their communication and prepare accordingly to ensure the desired outcome.

  **Example:** Students will communicate precisely using clear definitions and provide carefully formulated explanations when constructing arguments. Students will communicate and defend mathematical reasoning using objects, drawings, diagrams, and/or actions. Students will ask probing questions to clarify or improve arguments.
• **CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.**
Career-ready individuals readily recognize problems in the workplace, understand the nature of the problem, and devise effective plans to solve the problem. They are aware of problems when they occur and take action quickly to address the problem; they thoughtfully investigate the root cause of the problem prior to introducing solutions. They carefully consider the options to solve the problem. Once a solution is agreed upon, they follow through to ensure the problem is solved, whether through their own actions or the actions of others.

  **Example:** Students will understand the meaning of a problem and look for entry points to its solution. They will analyze information, make conjectures, and plan a solution pathway to solve linear and quadratic equations in two variables.

• **CRP12. Work productively in teams while using cultural global competence.**
Career-ready individuals positively contribute to every team, whether formal or informal. They apply an awareness of cultural difference to avoid barriers to productive and positive interaction. They find ways to increase the engagement and contribution of all team members. They plan and facilitate effective team meetings.

  **Example:** Students will work collaboratively in groups to solve mathematical tasks. Students will listen to or read the arguments of others and ask probing questions to clarify or improve arguments. They will be able to explain how to perform operations with complex numbers.
WIDA Proficiency Levels

At the given level of English language proficiency, English language learners will process, understand, produce or use:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6- Reaching</td>
<td>- Specialized or technical language reflective of the content areas at grade level&lt;br&gt;- A variety of sentence lengths of varying linguistic complexity in extended oral or written discourse as required by the specified grade level&lt;br&gt;- Oral or written communication in English comparable to proficient English peers</td>
</tr>
<tr>
<td>5- Bridging</td>
<td>- Specialized or technical language of the content areas&lt;br&gt;- A variety of sentence lengths of varying linguistic complexity in extended oral or written discourse, including stories, essays or reports&lt;br&gt;- Oral or written language approaching comparability to that of proficient English peers when presented with grade level material.</td>
</tr>
<tr>
<td>4- Expanding</td>
<td>- Specific and some technical language of the content areas&lt;br&gt;- A variety of sentence lengths of varying linguistic complexity in oral discourse or multiple, related sentences or paragraphs&lt;br&gt;- Oral or written language with minimal phonological, syntactic or semantic errors that may impede the communication, but retain much of its meaning, when presented with oral or written connected discourse, with sensory, graphic or interactive support</td>
</tr>
<tr>
<td>3- Developing</td>
<td>- General and some specific language of the content areas&lt;br&gt;- Expanded sentences in oral interaction or written paragraphs&lt;br&gt;- Oral or written language with phonological, syntactic or semantic errors that may impede the communication, but retain much of its meaning, when presented with oral or written, narrative or expository descriptions with sensory, graphic or interactive support</td>
</tr>
<tr>
<td>2- Beginning</td>
<td>- General language related to the content area&lt;br&gt;- Phrases or short sentences&lt;br&gt;- Oral or written language with phonological, syntactic, or semantic errors that often impede the communication when presented with one to multiple-step commands, directions, or a series of statements with sensory, graphic or interactive support</td>
</tr>
<tr>
<td>1- Entering</td>
<td>- Pictorial or graphic representation of the language of the content areas&lt;br&gt;- Words, phrases or chunks of language when presented with one-step commands directions, WH-, choice or yes/no questions, or statements with sensory, graphic or interactive support</td>
</tr>
</tbody>
</table>
## Language Development Supports For English Language Learners
To Increase Comprehension and Communication Skills

### Environment
- Welcoming and stress-free
- Respectful of linguistic and cultural diversity
- Honors students' background knowledge
- Sets clear and high expectations
- Includes routines and norms
- Is thinking-focused vs. answer-seeking
- Offers multiple modalities to engage in content learning and to demonstrate understanding
- Includes explicit instruction of specific language targets
- Provides participation techniques to include all learners
- Integrates learning centers and games in a meaningful way
- Provides opportunities to practice and refine receptive and productive skills in English as a new language
- Integrates meaning and purposeful tasks/activities that:
  - Are accessible by all students through multiple entry points
  - Are relevant to students' lives and cultural experiences
  - Build on prior mathematical learning
  - Demonstrate high cognitive demand
  - Offer multiple strategies for solutions
  - Allow for a language learning experience in addition to content

### Sensory Supports*
- Real-life objects (realia) or concrete objects
- Physical models
- Manipulatives
- Pictures & photographs
- Visual representations or models such as diagrams or drawings
- Videos & films
- Newspapers or magazines
- Gestures
- Physical movements
- Music & songs

### Graphic Supports*
- Graphs
- Charts
- Timelines
- Number lines
- Graphic organizers
- Graphing paper

### Interactive Supports*
- In a whole group
- In a small group
- With a partner such as **Turn-and-Talk**
- In pairs as a group (first, two pairs work independently, then they form a group of four)
- In triads
- Cooperative learning structures such as **Think-Pair-Share**
- Interactive websites or software
- With a mentor or coach

### Verbal and Textual Supports
- Labeling
- Students' native language
- Modeling
- Repetitions
- Paraphrasing
- Summarizing
- Guiding questions
- Clarifying questions
- Probing questions
- Leveled questions such as **What? Where? How? Why?**
- Questioning prompts & cues
- Word Banks
- Sentence starters
- Sentence frames
- Discussion frames
- Talk moves, including **Wait Time**

---

BUILDING EQUITY IN YOUR TEACHING PRACTICE

How do the essential questions highlight the connection between the big ideas of the unit and equity in your teaching practice?

**CONTENT INTEGRATION**
Teachers use examples and content from a variety of cultures & groups.

This unit / lesson is connected to other topics explored with students.
There are multiple viewpoints reflected in the content of this unit / lesson.
The materials and resources are reflective of the diverse identities and experiences of students.
The content affirms students, as well as exposes them to experiences other than their own.

**KNOWLEDGE CONSTRUCTION**
Teachers help students understand how knowledge is created and influenced by cultural assumptions, perspectives & biases.

This unit / lesson provides context to the history of privilege and oppression.
This unit / lesson addresses power relationships.
This unit / lesson help students to develop research and critical thinking skills.
This curriculum creates windows and mirrors* for students.

**PREJUDICE REDUCTION**
Teachers implement lessons and activities to assert positive images of ethnic groups & improve intergroup relations.

This unit / lesson help students question and unpack biases & stereotypes.
This unit / lesson help students examine, research and question information and sources.
The curriculum encourage discussion and understanding about the groups of people being represented.
This unit / lesson challenges dominant perspectives.

**EQUITABLE PEDAGOGY**
Teachers modify techniques and methods to facilitate the academic achievement of students from diverse backgrounds.

The instruction has been modified to meet the needs of each student.
Students feel respected and their cultural identities are valued.
Additional supports have been provided for students to become successful and independent learners.
Opportunities are provided for student to reflect on their learning and provide feedback.

**EMPOWERING SCHOOL CULTURE**
Using the other four dimensions to create a safe and healthy educational environment for all.

There are opportunities for students to connect with the community.
My classroom is welcoming and supportive for all students?
I am aware of and sensitive to the needs of my students and their families.
There are effective parent communication systems established. Parents can talk to me about issues as they arise in my classroom.

<table>
<thead>
<tr>
<th>Culturally Relevant Pedagogy Examples</th>
</tr>
</thead>
</table>
| • **Integrate Relevant Word Problems:** Contextualize equations using word problems that reference student interests and cultures.  
  *Example:* When learning about building functions in two variables, problems that relate to student interests such as music, sports and art enable the students to understand and relate to the concept in a more meaningful way. |
| • **Everyone has a Voice:** Create a classroom environment where students know that their contributions are expected and valued.  
  *Example:* Norms for sharing are established that communicate a growth mindset for mathematics. All students are capable of expressing mathematical thinking and contributing to the classroom community. Students learn new ways of looking at problem solving by working with and listening to each other. |
| • **Run Problem Based Learning Scenarios:** Encourage mathematical discourse among students by presenting problems that are relevant to them, the school and/or the community.  
  *Example:* Using a Place Based Education (PBE) model, students explore math concepts such as systems of equations while determining ways to address problems that are pertinent to their neighborhood, school or culture. |
| • **Encourage Student Leadership:** Create an avenue for students to propose problem solving strategies and potential projects.  
  *Example:* Students can learn to construct and compare linear, quadratic and exponential models by creating problems together and deciding if the problems fit the necessary criteria. This experience will allow students to discuss and explore their current level of understanding by applying the concepts to relevant real-life experiences. |
| • **Present New Concepts Using Student Vocabulary:** Use student diction to capture attention and build understanding before using academic terms.  
  *Example:* Teach math vocabulary in various modalities for students to remember. Use multi-modal activities, analogies, realia, visual cues, graphic representations, gestures, pictures and cognates. Directly explain and model the idea of vocabulary words having multiple meanings. Students can create the Word Wall with their definitions and examples to foster ownership. |
# SOCIAL AND EMOTIONAL LEARNING (SEL) COMPETENCIES

## SELF-AWARENESS

The ability to accurately recognize one’s own emotions, thoughts, and values and how they influence behavior. The ability to accurately assess one’s strengths and limitations, with a well-grounded sense of confidence, optimism, and a “growth mindset.”

- IDENTIFYING EMOTIONS
- ACCURATE SELF-PERCEPTION
- RECOGNIZING STRENGTHS
- SELF-CONFIDENCE
- SELF-EFFICACY

## SOCIAL AWARENESS

The ability to take the perspective of and empathize with others, including those from diverse backgrounds and cultures. The ability to understand social and ethical norms for behavior and to recognize family, school, and community resources and supports.

- PERSPECTIVE-TAKING
- EMPATHY
- APPRECIATING DIVERSITY
- RESPECT FOR OTHERS

## SELF-MANAGEMENT

The ability to successfully regulate one’s emotions, thoughts, and behaviors in different situations — effectively managing stress, controlling impulses, and motivating oneself. The ability to set and work toward personal and academic goals.

- IMPULSE CONTROL
- STRESS MANAGEMENT
- SELF-DISCIPLINE
- SELF-MOTIVATION
- GOAL SETTING
- ORGANIZATIONAL SKILLS

## RELATIONSHIP SKILLS

The ability to establish and maintain healthy and rewarding relationships with diverse individuals and groups. The ability to communicate clearly, listen well, cooperate with others, resist inappropriate social pressure, negotiate conflict constructively, and seek and offer help when needed.

- COMMUNICATION
- SOCIAL ENGAGEMENT
- RELATIONSHIP BUILDING
- TEAMWORK

## RESPONSIBLE DECISION-MAKING

The ability to make constructive choices about personal behavior and social interactions based on ethical standards, safety concerns, and social norms. The realistic evaluation of consequences of various actions, and a consideration of the well-being of oneself and others.

- IDENTIFYING PROBLEMS
- ANALYZING SITUATIONS
- SOLVING PROBLEMS
- EVALUATING
- REFLECTING
- ETHICAL RESPONSIBILITY
<table>
<thead>
<tr>
<th>SEL Competency</th>
<th>Examples</th>
<th>Content Specific Activity &amp; Approach to SEL</th>
</tr>
</thead>
</table>
| ✓ Self-Awareness  
Self-Management  
Social-Awareness  
Relationship Skills  
Responsible Decision-Making | **Example practices that address Self-Awareness:**  
• Clearly state classroom rules  
• Provide students with specific feedback regarding academics and behavior  
• Offer different ways to demonstrate understanding  
• Create opportunities for students to self-advocate  
• Check for student understanding / feelings about performance  
• Check for emotional wellbeing  
• Facilitate understanding of student strengths and challenges | Encourage students to articulate their thoughts by restating the problem in their own words or by describing to you what they know about the scenario and the question(s) being asked. Acknowledge any student frustrations with the task and remind them that frustration is normal when working with a challenging task.  
Ask students to identify their own personal interest, strengths, and weaknesses in math. For example, have students evaluate their strengths and weaknesses when writing arithmetic and geometric sequences both recursively and with an explicit formula. |
| ✓ Self-Management  
Social-Awareness  
Relationship Skills  
Responsible Decision-Making | **Example practices that address Self-Management:**  
• Encourage students to take pride/ownership in work and behavior  
• Encourage students to reflect and adapt to classroom situations  
• Assist students with being ready in the classroom  
• Assist students with managing their own emotional states | Have students brainstorm ways to motivate themselves and self-monitor. Use fraction bars and other linear diagrams to represent their learning targets (e.g., mood thermometers or progress lines). Discuss your own self-motivation techniques that keeps you going when you want to give up.  
Practicing how to make tough decisions can help your students learn how their actions affect others. Give your students real-life application problems in which they would have to make an important choice. Have them write down their answer to each situation by themselves, then discuss their answers as a class. |
<table>
<thead>
<tr>
<th>Self-Awareness</th>
<th>Example practices that address Social-Awareness:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-Management</td>
<td>• Encourage students to reflect on the perspective of others</td>
</tr>
<tr>
<td>✓ Social-Awareness</td>
<td>• Assign appropriate groups</td>
</tr>
<tr>
<td>Relationship Skills</td>
<td>• Help students to think about social strengths</td>
</tr>
<tr>
<td>Responsible Decision-Making</td>
<td>• Provide specific feedback on social skills</td>
</tr>
<tr>
<td>Model positive social awareness through metacognition activities</td>
<td>During the first week of school, work collaboratively with students to establish shared classroom rules and expectations and consequences so that students can see the impact of their own actions and behaviors on outcomes.</td>
</tr>
<tr>
<td>Tell stories about famous mathematicians who showed respect for each other within the discipline (e.g., Blaise Pascal and Pierre de Fermat) to demonstrate to students how to listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve their arguments.</td>
<td></td>

**Note:** This table outlines various strategies for accommodating students' individual needs in different domains, including time, processing, comprehension, recall, assistive technology, tests/ quizzes/ grading, behavior/ attention, and organization.
### Differentiated Instruction

#### Accommodate Based on Content Needs: Strategies

- Anchor charts to model strategies for finding the length of the arc of a circle
- Review Algebra concepts to ensure students have the information needed to progress in understanding
- Pre-teach pertinent vocabulary
- Provide reference sheets that list formulas, step-by-step procedures, theorems, and modeling of strategies
- Word wall with visual representations of mathematical terms
- Teacher modeling of thinking processes involved in solving, graphing, and writing equations
- Introduce concepts embedded in real-life context to help students relate to the mathematics involved
- Record formulas, processes, and mathematical rules in reference notebooks
- Graphing calculator to assist with computations and graphing of trigonometric functions
- Utilize technology through interactive sites to represent nonlinear data
- Graphic organizers to help students interpret the meaning of terms in an expression or equation in context
- Translation dictionary
- Sentence stems to provide additional language support for ELL students.
## Interdisciplinary Connections

*Model interdisciplinary thinking to expose students to other disciplines.*

**Social Studies Connection:** Social Studies Standard 6.2.12.B.1.a; 6.2.12.B.1.b

**Name of Task:** Carbon 14 Dating

- The task requires the student to use logarithms to solve an exponential equation in the realistic context of carbon dating, important in archaeology and geology, among other places.

**Science Connection:** Science Standard HS-PS-1-6

**Name of Task:** Course of Antibiotics

- This task presents a real world application of finite geometric series. The context can lead into several interesting follow-up questions and projects. Many drugs only become effective after the amount in the body builds up to a certain level. This can be modeled very well with geometric series.
## Enrichment

### What is the Purpose of Enrichment?

- The purpose of enrichment is to provide extended learning opportunities and challenges to students who have already mastered, or can quickly master, the basic curriculum. Enrichment gives the student more time to study concepts with greater depth, breadth, and complexity.
- Enrichment also provides opportunities for students to pursue learning in their own areas of interest and strengths.
- Enrichment keeps advanced students engaged and supports their accelerated academic needs.
- Enrichment provides the most appropriate answer to the question, “What do you do when the student already knows it?”

### Enrichment is…

- Planned and purposeful
- *Different,* or differentiated, work – not just *more* work
- Responsive to students’ needs and situations
- A promotion of high-level thinking skills and making connections within content
- The ability to apply different or multiple strategies to the content
- The ability to synthesize concepts and make real world and cross-curricular connections
- Elevated contextual complexity
- Sometimes independent activities, sometimes direct instruction
- Inquiry based or open-ended assignments and projects
- Using supplementary materials in addition to the normal range of resources
- Choices for students
- Tiered/Multi-level activities with flexible groups (may change daily or weekly)

### Enrichment is not…

- Just for gifted students (some gifted students may need intervention in some areas just as some other students may need frequent enrichment)
- Worksheets that are more of the same (busywork)
- Random assignments, games, or puzzles not connected to the content areas or areas of student interest
- Extra homework
- A package that is the same for everyone
- Thinking skills taught in isolation
- Unstructured free time
Assessments

**Required District/State Assessments**
- Unit Assessment
- NJSLA
- SGO Assessments

**Suggested Formative/Summative Classroom Assessments**
- Describe Learning Vertically
- Identify Key Building Blocks
- Make Connections (between and among key building blocks)
- Short/Extended Constructed Response Items
- Multiple-Choice Items (where multiple answer choices may be correct)
- Drag and Drop Items
- Use of Equation Editor
- Quizzes
- Journal Entries/Reflections/Quick-Writes
- Accountable talk
- Projects
- Portfolio
- Observation
- Graphic Organizers/Concept Mapping
- Presentations
- Role Playing
- Teacher-Student and Student-Student Conferencing
- Homework
**New Jersey Student Learning Standards**

**N.CN.A.1.**  
Know there is a complex number \( i \) such that \( i^2 = -1 \), and every complex number has the form \( a + bi \) with \( a \) and \( b \) real.

**N.CN.A.2.**  
Use the relation \( i^2 = -1 \) and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers

**N.CN.C.7.**  
Solve quadratic equations with real coefficients that have complex solutions.

**A.REI.B.4.**  
Solve quadratic equations in one variable.  
**A.REI.B.4b.** Solve quadratic equations by inspection (e.g., for \( x^2 = 49 \)), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as \( a \pm bi \) for real numbers \( a \) and \( b \).

**A.REI.C.7.**  
Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. *For example, find the points of intersection between the line* \( y = -3x \) *and the circle* \( x^2 + y^2 = 3 \).

**A.REI.C.6.**  
Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.

**N.VM.C.8**  
Add, subtract, and multiply matrices of appropriate dimensions.

**A.REI.C.8**  
Represent a system of linear equations as a single matrix equation in a vector variable.

**A.REI.C.9**  
Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension \( 3 \times 3 \) or greater).
New Jersey Student Learning Standards

F.BF.A.2.
Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.

F.LE.A.2
Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).

F.LE.B.5.
Interpret the parameters in a linear or exponential function in terms of a context.

A.SSE.B.4.
Derive and/or explain the derivation of the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. For example, calculate mortgage payments.

N.RN.A.1.
Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5^{(1/3)\cdot3}$ to hold, so $(5^{1/3})^3$ must equal 5.

N.RN.A.2.
Rewrite expressions involving radicals and rational exponents using the properties of exponents.

A.SSE.B.3.
Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression

A.SSE.B.3c: Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1.15^{1/12})^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.

F.IF.C.8.
Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function
New Jersey Student Learning Standards

**F.IF.C.8b**: Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as \( y = (1.02)^t \), \( y = (0.97)^t \), \( y = (1.01)^{12t} \), \( y = (1.2)^{\frac{t}{10}} \), and classify them as representing exponential growth or decay.

**F.BF.B.4**
Find inverse functions.

- **F.BF.B.4a**: Solve an equation of the form \( f(x) = c \) for a simple function \( f \) that has an inverse and write an expression for the inverse.  
  *For example, \( f(x) = 2x^3 \) or \( f(x) = \frac{x+1}{(x-1)} \) for \( x \neq 1 \).*

- **F.BF.B.4b**: Verify by composition that one function is the inverse of another.

- **F.BF.B.4c**: Read values of an inverse function from a graph or a table, given that the function has an inverse.

- **F.BF.B.4d**: Produce an invertible function from a non-invertible function by restricting the domain.

**F.LE.A.4.**
Understand the inverse relationship between exponents and logarithms. For exponential models, express as a logarithm the solution to \( ab^{ct} = d \) where \( a \), \( c \), and \( d \) are numbers and the base \( b \) is 2, 10, or \( e \); evaluate the logarithm using technology.

**F.BF.B.5**
Use the inverse relationship between exponents and logarithms to solve problems involving logarithms and exponents.
Mathematical Practices

1. Make sense of problems and persevere in solving them.

2. Reason abstractly and quantitatively.

3. Construct viable arguments and critique the reasoning of others.

4. Model with mathematics.

5. Use appropriate tools strategically.

6. Attend to precision.

7. Look for and make use of structure.

8. Look for and express regularity in repeated reasoning.
Course: Algebra II Honors  
Unit: 1 (One)  
Topic: Complex Solutions and Modeling with Rational Exponents

**NJSLS:**

**Unit Focus:**
- Perform arithmetic operations with complex numbers
- Use complex numbers in polynomial identities and equations
- Build a function that models a relationship between two quantities
- Construct & compare linear, quadratic, & exponential models
- Write expressions in equivalent forms to solve problems
- Extend the properties of exponents to rational exponents
- Analyze functions using different representations

**New Jersey Student Learning Standard(s):**
N.CN.A.1: Know there is a complex number $i$ such that $i^2 = -1$, and every complex number has the form $a + bi$ with $a$ and $b$ real.

N.CN.A.2: Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers

**Student Learning Objective 1:** Add, subtract, and multiply complex numbers using the commutative, associative and distributive properties.

**Modified Student Learning Objectives/Standards:**
M.EE.N-CN.2.a. Use the commutative, associative, and distributive properties to add, subtract, and multiply whole numbers.
M.EE.N-CN.2.b. Solve real-world problems involving addition and subtraction of decimals, using models when needed.
M.EE.N-CN.2.c. Solve real-world problems involving multiplication of decimals and whole numbers, using models when needed.

Every complex number has the form $a + bi$ with $a$ and $b$ real.

$i^2 = -1$ and the commutative, associative properties to add and subtract complex numbers are to be used.

Determine that $i^2 = -1$ and the commutative, associative, and distributive properties to multiply complex numbers.

**SPED Strategies:**
Relate the idea of adding, subtracting and multiplying complex numbers to whole numbers.

Explain the background of complex numbers and connect to real life by explaining how they are used in electrical circuits.

Use the example of the cyclical nature of the ones digit in the powers of 3 and connect it to the cyclical nature of the powers of $i$.

Develop a reference document with students with verbal and pictorial descriptions.

**ELL Strategies:**
Describe and explain orally and in writing how to use properties of operations to add, subtract, and multiply complex numbers in the student’s native language and/or use selected technical vocabulary in phrases and

| How are the powers of $i$ derived and how are they cyclic? |
| Why is it when simplifying imaginary and complex numbers that the highest power of $i$ is one? |

**Type II, III:**

Complex number patterns

Powers of a complex number

Complex Square Roots

Additional Tasks:
Complex Cube and Fourth Root of 1

Vertex of a parabola with complex roots
Encourage students to highlight like terms - use one color for the real parts and another color for the imaginary parts.

Make a table with the words: Imaginary Unit, Complex Number and Imaginary Number, then write an example for each word in the column.

**New Jersey Student Learning Standard(s):**

N.CN.C.7: Solve quadratic equations with real coefficients that have complex solutions.

A.REI.B.4: Solve quadratic equations in one variable.

A.REI.B.4b: Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a \pm bi$ for real numbers $a$ and $b$.

**Student Learning Objective 2:** Solve quadratic equations with real coefficients that have complex solutions by taking square roots, completing the square and factoring.

**Modified Student Learning Objectives/Standards:** N/A

**Additional Tasks:**
- Completing the square
- Springboard Dive
- Vertex of a parabola with complex roots
- Visualizing completing the square
- Zero Property 4
Encourage students to verbalize their thinking while solving quadratic equations by asking assessing and advancing questions.

**ELL Strategies:**
Describe and explain how to solve quadratic equations with real coefficients that have complex solutions using in the student’s native language and/or use selected technical vocabulary in phrases and short sentences with equations to explain the solution.

Use a Venn diagram to represent the solution of a quadratic equation that expresses the relationship between Complex numbers and real numbers.

Let students discuss the possible form of the solution of quadratic equations. Indicate if students can obtain a real solution or an imaginary solution.
New Jersey Student Learning Standard(s):
A.REI.C.7: Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line \( y = -3x \) and the circle \( x^2 + y^2 = 3 \).

**Student Learning Objective 3:** Solve simple systems consisting of a linear and quadratic equation in two variables algebraically and graphically.

**Modified Student Learning Objectives/Standards:**
M.EE.A-REI.10–12: Interpret the meaning of a point on the graph of a line. For example, on a graph of pizza purchases, trace the graph to a point and tell the number of pizzas purchased and the total cost of the pizzas.

</table>
- Prompts describe a scenario using everyday language. Mathematical language such as "function," "exponential," etc. is not used.
- Students autonomously choose and apply appropriate mathematical techniques without prompting. For example, in a situation of doubling, they apply techniques of exponential functions.
- For some illustrations, see tasks at http://illustrativemathematics.org under F-LE.

| Recognize explicit formula for geometric sequences as exponential functions containing a domain in the integers only. |
| Interpreting the parameters of an exponential function representing a geometric sequence. |
| Interpret the parameters of a linear function representing an arithmetic sequence. |

**SPED Strategies:**
Review the differences between geometric and arithmetic sequences by giving students examples and illustrating the characteristics that distinguish them.

Pre-teach the vocabulary and provide verbal and pictorial descriptions. (i.e. recursive and explicit formulas).

Model the thinking and procedure involved in writing geometric and arithmetic sequences in recursive and explicit form.

Provide students with a graphic organizer/reference sheet/Google Doc that highlights the thinking and procedure involved in writing geometric and arithmetic sequences in recursive and explicit form.

**ELL Strategies:**
After listening to an oral explanation in the student’s native language, demonstrate

| What are some of the characteristics of the graph of an exponential function? |
| How can you recognize polynomial, exponential, and logarithmic models? |
| What data do you need to write a function to model a given situation? |
| How do you determine if a given situation is modeled by a linear or exponential function? |
| Create an example of a linear or exponential situation and give the function that can be used to model the situation. |
| What does each part of the function represent in the context of the problem and what are the parameters? |

<td>Properties of integer exponents extends to rational exponents (for example, we define $5^{1/3}$ to be the cube root of 5 because we want $(5^{1/3})^3 = 5$ to hold, so $(5^{1/3})^3$ must equal 5)</td>
<td>How can students use properties of exponents to simplify products and quotients of radicals?</td>
<td>IFL Sets of Related Lessons “Investigating Rational Exponents” Type II, III:</td>
</tr>
</tbody>
</table>
Radical notation is a representation of rational exponents.

Rewrite expressions containing rational exponents into radical form.

Rewrite expressions containing radical notation into exponential expressions containing rational exponents.

Rational exponents are exponents that are fractions.

Properties of integer exponents extend to properties of rational exponents.

Properties of rational exponents are used to simplify and create equivalent forms of numerical expressions.

Rational exponents can be written as radicals, and radicals can be written as rational exponents.

**SPED Strategies:**
Pre-teach vocabulary and provide verbal and pictorial descriptions to maximize understanding and interest.

Review the rules of exponents with students and provide them with a reference document highlighting rules and examples.

How can students write general rules involving properties of exponents?

How can students write and evaluate the nth root of a number?

How do students use properties of rational exponents to simplify and create equivalent forms of numerical expressions?

Why are rational exponents and radicals related to each other?

Given an expression with a rational exponent, how do you write the equivalent radical expression?

Certain properties govern operations with terms involving exponents. They include:

- the multiplication property of exponents which states that \( a^m \times a^n = a^{m+n} \)
- when \( a \neq 0 \), the division property of exponents

---

Evaluating a Special Exponential Expression

Evaluating Exponential Expressions

Extending the Definitions of Exponents, Variation 2

Rational or Irrational

Checking a calculation of a decimal exponent
Model the thinking and processes involved in converting expressions involving radicals and rational exponents.

Provide students with opportunity to practice with peers and encourage them to verbalize and justify their thinking process.

**ELL Strategies:**

Demonstrate understanding of the properties of integer exponents; then explain orally how to use properties of integer exponents using correct notation in the student’s native language and/or use gestures, examples and selected, technical words.

Pre-teach vocabulary and provide verbal and pictorial descriptions to review the language and notation of radicals and roots.

Model a real application as Johannes Kepler third law, and make a diagram to conclude about the value of the variables.

Provide students with a visual example of each point of a radical expression in simplest form.

These properties apply to all real number exponents.
New Jersey Student Learning Standard(s):
A.SSE.B.3: Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression

A.SSE.B.3c: Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1.15^{1/12})^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.

F.IF.C.8: Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function

F.IF.C.8b: Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.02)^t$, $y = (0.97)^t$, $y = (1.01)^{12t}$, $y = (1.2)^{t/10}$, and classify them as representing exponential growth or decay.

Student Learning Objective 8: Use the properties of exponents to transform expressions for exponential functions, explain properties of the quantity revealed in the transformed expression or different properties of the function.

Modified Student Learning Objectives/Standards:
M.EE.A-SSE.3: Solve simple algebraic equations with one variable using multiplication and division.

Solutions to an exponential equation in one variable can be written as a logarithm.

The graphs of a logarithmic function and its inverse (exponential function) are mirror images of each other.

**SPED Strategies:**
Refer students to the document created for SLO 11 and add additional information that ties into the inverse relationship of logarithms and exponents.

Model the thinking and reasoning behind inverse relationship between logarithmic and exponential functions using real life contexts/applications.

**ELL Strategies:**
Refer students to the documents created in SLO 11 regarding inverse functions and add information about logarithms and exponents.

Provide students with the opportunity to work on contextual problems and ask them assessing and advancing questions. This will clarify and extend understanding.

How do logarithms help you to solve exponential functions?

How do you change bases in logarithmic expressions?

How do you use properties of logarithms to evaluate or rewrite expressions?

What are some of the characteristics of the graph of a logarithmic function?

How can you use the graph of an exponential function to obtain the graph of a logarithmic function?

Integrated Evidence Statements

A.Int.1: Solve equations that require seeing structure in expressions

- Tasks do not have a context.
- Equations simplify considerably after appropriate algebraic manipulations are performed. For example, $x^4 - 17x^2 + 16 = 0$, $2^{3x} = 7(2^{2x}) + 2^x$, $x - \sqrt{x} = 3\sqrt{x}$
- Tasks should be course level appropriate.

F-BF.Int.2: Find inverse functions to solve contextual problems. Solve an equation of the form $f(x) = c$ for a simple function $f$ that has an inverse and write an expression for the inverse. For example, $f(x) = 2x^3$ or $f(x) = \frac{x+1}{x-1}$ for $x \neq 1$.

- For example, see http://illustrativemathematics.org/illustrations/234.
- As another example, given a function $C(L) = 750L^2$ for the cost $C(L)$ of planting seeds in a square field of edge length $L$, write a function for the edge length $L(C)$ of a square field that can be planted for a given amount of money $C$; graph the function, labeling the axes.
- This is an integrated evidence statement because it adds solving contextual problems to standard F-BF.4a.

F-Int.1-2: Given a verbal description of a polynomial, exponential, trigonometric, or logarithmic functional dependence, write an expression for the function and demonstrate various knowledge and skills articulated in the Functions category in relation to this function.

- Given a verbal description of a functional dependence, the student would be required to write an expression for the function and then, e.g., identify a natural domain for the function given the situation; use a graphing tool to graph several input-output pairs; select applicable features of the function, such as linear, increasing, decreasing, quadratic, periodic, nonlinear; and find an input value leading to a given output value.

HS-Int.3-3: Solve multi-step contextual word problems with degree of difficulty appropriate to the course, requiring application of course-level knowledge and skills articulated in F-LE, A-CED.1, A-SSE.3, F-IF.B, F-IF.7★

- F-LE.A, Construct and compare linear, quadratic, and exponential models and solve problems, is the primary content and at least one of the other listed content elements will be involved in tasks as well.

HS.C.3.1: Construct, autonomously, chains of reasoning that will justify or refute propositions or conjectures about numbers or number systems. Content Scope: N-RN, N-CN

HS.C.3.2: Base explanations/reasoning on the properties of exponents. Content Scope: N-RN.A

HS.C.4.1: Derive and use a formula. Content Scope: A-SSE.4
Integrated Evidence Statements

HS.C.12.2: Construct, autonomously, chains of reasoning that will justify or refute propositions or conjectures about functions. Content scope: F-IF.8b.

HS.C.18.4: Construct, autonomously, chains of reasoning that will justify or refute propositions or conjectures about polynomials, rational expressions, or rational exponents. Content scope: N-RN, A-APR.(2, 3, 4, 6)

   - Tasks will draw on securely held content from previous grades and courses, including down to Grade 7, but that are at the Algebra II/Mathematics III level of rigor.
   - Tasks will synthesize multiple aspects of the content listed in the evidence statement text, but need not be comprehensive.
   - Tasks should address at least A-SSE.A.1b, A-REI.A.1, and F-IF.A.2 and either F-IF.C.7a or F-IF.C.7e (excluding trigonometric and logarithmic functions). Tasks should also draw upon additional content listed for grades 7 and 8 and from the remaining standards in the Evidence Statement Text.

   - A-CED is the primary content; other listed content elements may be involved in tasks as well.

HS.D.3-5: Decisions from data: Identify relevant data in a data source, analyze it, and draw reasonable conclusions from it. Content scope: Knowledge and skills articulated in Algebra 2.
   - Tasks may result in an evaluation or recommendation. ii.) The purpose of tasks is not to provide a setting for the student to demonstrate breadth in data analysis skills (such as box-and-whisker plots and the like). Rather, the purpose is for the student to draw conclusions in a realistic setting using elementary techniques.
Integrated Evidence Statements

HS.D.CCR: Solve problems using modeling: Identify variables in a situation, select those that represent essential features, formulate a mathematical representation of the situation using those variables, analyze the representation and perform operations to obtain a result, interpret the result in terms of the original situation, validate the result by comparing it to the situation, and either improve the model or briefly report the conclusions. Content scope: Knowledge and skills articulated in the Standards as described in previous courses and grades, with a particular emphasis on 7- RP, 8 – EE, 8 – F, N-Q, A-CED, A-REI, F-BF, G-MG, Modeling, and S-ID

- Tasks will draw on securely held content from previous grades and courses, include down to Grade 7, but that are at the Algebra II/Mathematics III level of rigor.
- Task prompts describe a scenario using everyday language. Mathematical language such as "function," "equation," etc. is not used.
- Tasks require the student to make simplifying assumptions autonomously in order to formulate a mathematical model. For example, the student might make a simplifying assumption autonomously that every tree in a forest has the same trunk diameter, or that water temperature is a linear function of ocean depth.
- Tasks may require the student to create a quantity of interest in the situation being described.

Field Trip Ideas

**SIX FLAGS GREAT ADVENTURE:** This educational event includes workbooks and special science and math related shows throughout the day. Your students will leave with a better understanding of real world applications of the material they have learned in the classroom. Each student will have the opportunity to experience different rides and attractions linking mathematical and scientific concepts to what they are experiencing.

www.sixflags.com

**MUSEUM of MATHEMATICS:** Mathematics illuminates the patterns that abound in our world. The National Museum of Mathematics strives to enhance public understanding and perception of mathematics. Its dynamic exhibits and programs stimulate inquiry, spark curiosity, and reveal the wonders of mathematics. The Museum’s activities lead a broad and diverse audience to understand the evolving, creative, human, and aesthetic nature of mathematics.

www.momath.org

**LIBERTY SCIENCE CENTER** - An interactive science museum and learning center located in Liberty State Park. The center, which first opened in 1993 as New Jersey's first major state science museum, has science exhibits, the largest IMAX Dome theater in the United States, numerous educational resources, and the original *Hoberman sphere*.
